Field of the Invention The invention relates to a concrete vibrating element, more particularly to a concrete vibrating element having a number of self-contained vibrators and an electrically powered vibrator. 2. Description of the Related Art Conventionally, the vibrating element for the concrete cutter is mounted on the concrete cut by the concrete cutter and has a number of vibrators mounted thereon. The vibrators are coupled to the concrete cut by the concrete cutter for vibrating the concrete cut. Therefore, the concrete cut must be vibrated for a long time in order to ensure that the vibrating element provides a desirable cutting effect. In addition, the conventional vibrating element for the concrete cutter cannot simultaneously vibrate the concrete cut and an object to be vibrated (e.g., a wall). Therefore, the cutting process is not smooth and time-consuming.Q: Solve the functional equation  $\phi(a) = \phi(a^2-1)$  This is a problem from Real and Complex Analysis by Karakashev: Solve the functional equation  $\phi(a) = \phi(a^2-1)$  where  $\phi$  is an analytic function on the real line. There is a hint that is worth mentioning:  $\phi$  is continuous at  $x=1$  and  $\phi(1) = \phi'(1)$  The answer is  $\phi(x) = c \log|x| + d$ , with  $c, d$  constant. I can show that  $\phi(x) = d$  if  $|x| \leq 1$ . I don't know how to approach the region  $|x| \geq 1$ .
