Jaws.13.0.1006.x86.x64.working Autocad 2016 Jaws.13.0.1006.x86.x64.workingQ: ASP.NET MVC validating against null fields I have a Model that has a FK field "FooId", and I can get the FooId to show in the view with: However, when the Foo is null, the view still renders, and that breaks the view validation, so a validation error is rendered in the view. I am not sure how to solve this problem. I have tried doing this, but still the validation error is rendered: I also tried this but it did not work either:

How do I handle a null FooId in the view? A: The best way I have found to solve this problem is to create a new class which derives from MvcHtmlString. In the new class I set the value I want to display to a different value than the actual value. So in this case, I would do something like this: `public class NullableMvcHtmlString : MvcHtmlString { public NullableMvcHtmlString(string value) : base(value) { } }` And then in my view I would set the value I want to display as the html value of the nullable mvc html string, like this: And I would add a specific Html helper extension method to the model like this: `public static MvcHtmlString HasNullableId(this HtmlHelper htmlHelper, object model) { if(model == null) return new NullableMvcHtmlString("0"); return MvcHtmlString.Create(Model.Foo?.Id.ToString()); }` So now it works perfectly and
