Hello,I use Garmin mapsourc 6.15.11:The software is perfect. I use it with 3 satellite gps receivers (Geko 664,  
Suunto 8x).When i use I get 2d/3d movement but when i zoom in it stops.I use a map (test 5.1.55).When i do the  
movement i can see veers and errors. When i zoom in the veers stop, it seems it is fine but it must not be, i need it  
when i zoom in. If I zoom in also the veers stop? The questions are : Can i use my device with dynamic map? Can i  
use my device with dynamic map with satellite gps receivers? Can you please help me? Thank you.

I had this problem as well. I had the same problems as you. I ran  
my GPS for 6 hours and it worked fine, but when I went inside and tried to zoom in, it happened that the GPS  
wouldn't play with my map. When I pressed "ok" it would then ask me to connect it to my pc. I would do that, the  
map would load correctly, and I could zoom in, but as soon as I tried to move the map with the arrows, the map  
would go crazy and I would have to reconnect the GPS. It was the same for me. I suggest that if you have the map  
working fine with out a problem, try downloading a map that has a lot of detail. I had this problem and gave up. All  
Garmin GPS's are the same way in my experience. Thank you for the response. Yes, i tried with the map that works  
well and still have this problem. When I zoom in it stops. I am sure you found my problem. But I didn't find the  
answer. When i press "zoom in" it stops, i can't move the map without disconnecting the device. Sorry if I didn't  
answer your question. The downloading of map works fine because i have a working map. In my case the "problem"  
is that when i zoom in with the map on the device, the device stops working, I don't know why. It would be great if  
someone knows an solution. Thank you. Hello, I use Garmin mapsourc 6.13.7 (version 6.15.11):The 1cb139a0ed
