

# Front Axle Shafts Manufacturer

The front axle shafts help to carry weights of the front section of the vehicle, as well, as facilitate steering & to absorb shocks due to changes in the road surface. The central portion is an I-section, while the ends are either round or oval in shape. A portion of the vehicle's weight needs to be supported by the front axles, which also make steering easier and absorb road stress and brake torque.

Talbro Engineering Limited, based in Faridabad, Haryana, was founded in 1980 and is India's top-notch [Front Axle Shaft Manufacturers](#).
